INTelliwave2/INTelliwave2 Pro, Soft Daily Wear Contact Lenses for daily wear are indicated for the correction of visual acuity in aphakic and non-aphakic persons with non-diseased eyes with a refractive error up to +4.00 diopters.

Patients who wear contact lenses to correct presbyopia may not achieve the best corrected visual acuity for either far or near vision. Visual requirements vary with the individual and should be considered in prescribing lenses. Soft lenses are available in various powers.

Fluorescein, a yellow dye, should not be used while the lens is on the eye. The lens absorb this dye and become discolored. Whenever Fluorescein is used in eyes, the eyes should be flushed with a sterile saline or borate buffer solution prior to replacement of the lens.

If the lens sticks (stops moving) on the eye, follow the recommended directions for care for sticking non-moving lens. The lens should move freely on the eye for the continued health of the eye. If the lens dries out, it will become hard and appear somewhat warped however, it will return to its proper configuration when completely rehydrated in the proper storage solution.

DIMENSIONS

The lens material is available clear and with a blue visibility handling tint, phthalocyanato (2) - (copper).

The lens dries out, it will become hard and appear somewhat warped however, it will return to its proper configuration when completely rehydrated in the proper storage solution.

Do not touch contact lens with fingernails.

Always wash and rinse hands before handling lens. Do not get cosmetics, lotions, soaps, creams, deodorants, or sprays in the eyes or on the lens. It is best to put on lens before putting on makeup.

Do not touch the lens with fingernails.

Always contact the eyecare practitioner before using any medicine or medications in the eyes.

Patients unable to follow lens care regimen or unable to obtain assistance to do so.

IMMEDIATELY REMOVE YOUR LENS AND PROMPTLY CONTACT YOUR EYECARE PRACTITIONER.

IMMEDIATELY REMOVE LENS  

If the lens sticks (stops moving) on the eye, follow the recommended directions on care for sticking non-moving lens. The lens should move freely on the eye for the continued health of the eye. If the lens does not move on the eye, the patient should be immediately consulted by the eyecare practitioner.

LENS CARE DIRECTIONS
Eyecare practitioners should review with the patient lens care directions, including both basic lens care information and specific instructions on the lens care regimen recommended for the patient.

Basic Instructions:
Care of contact lens takes very little time and involves THREE essential steps – CLEANING, RINSING AND DISINFECTING. Each step is in itself important, and one step is not to be replaced by the other. Always wash, rinse and dry hands before handling contact lens. Always use FRESH, STERILE UNEXPLODED lens cases. Do not use the recommended chemical (not heat) lens care system. Different solutions cannot always be used together, and not all solutions are safe for use with all lenses. DO NOT ALTERNATE OR MIX LENS CARE SYSTEMS UNLESS INDICATED ON SOLUTION LABELING. Do not use saliva or anything other than the recommended solution for lubricating or rewetting lens. Do not put lens in the mouth. Lens should be cleaned, rinsed, and disinfected each time they are removed. Cleaning and rinsing are necessary to remove macu and film from the lens surface. Disinfecting is necessary to destroy harmful germs. The lens case must be emptied and refilled with fresh, sterile recommended storage and disinfection solution prior to disinfecting the lens. Eyecare practitioners may recommend a lubricating/rewetting solution, which can be used to wet (lubricate) lens while they are being worn to make them more comfortable.

Note:
Some solutions may have more than one function, which should be indicated on the label. Read the label on the solution bottle, and follow instructions.

Lens cleaning, disinfection, and storage:
Clean one lens at a time. Rinse the lens thoroughly with recommended solution to remove the cleaning solution, macu, and film from the lens surface, and put lens into correct chamber of the lens storage case. Then repeat the procedure for the second lens. After cleaning, do not rinse lens using the recommended solution for lubricating or rewetting lens. Place lens in the palm of your hand. IMMEDately consult the eyecare practitioner.

Lens Care Cleaning and Maintenance:
Contact lens cases can be a source of bacteria growth. After removing the lenses from the case, empty and rinse the lens case storage with solution as recommended by the lens case manufacturer; then allow the lens case to air dry. When the case is used again, refill it with solution storage. Replace lens case at regular intervals as recommended by the lens case manufacturer or your eyecare practitioner.

Lens Care Regimen:
Patients must adhere to the lens care regimen recommended by the eyecare practitioner for the Intelliwave2/Intelliwave2 Pro, Soft Daily Wear Contact Lens. Failure to follow this procedure may result in development of serious ocular infections.

Care for a dried out (dehydrated) dry lens:
If for some reason, your lens dries out completely a minimum of handling is important, as they are very brittle in the dehydrated state. Carefully place them in rinsing or storage solution for a minimum of thirty minutes during which time they will become soft and flexible. Then follow the rinsing, cleaning, and disinfecting procedures - including soaking the lenses in storage and disinfection solution for four hours before wearing again.

Care for a sticking (non-moving) lens:
If the lens sticks (cannot be removed), the patient should be instructed to apply 3 to 4 drops of the recommended lubricating or rewetting solution directly to the eye and wait until the lens begins to move freely on the eye before removing it. If removal of the lens continues after 15 minutes, the patient should IMMEDIATELY consult the eyecare practitioner.

Storage:
The Intelliwave2/Intelliwave2 Pro, Soft Daily Wear Contact Lens must be stored only in the recommended solutions. If left exposed to the air, the lens will dehydrate. If lens dehydrates, reference above section on caring for dried out (dehydrated) dry lens.

Prescriptions for frequent replacement:
Art Optical recommends that the Intelliwave2/Intelliwave2 Pro, Soft Daily Wear Contact Lens be discarded and replaced with a new lens every six months. However, as the Eyecare practitioner, you are encouraged to determine an appropriate lens replacement schedule based upon the response of the patient.

Chemical (NOT HEAT) Lens Disinfection:
Wash and rinse your hands thoroughly. BEFORE HANDLING LENS 1. Place lens in the palm of your hand. 2. Apply 1 or 2 drops of cleaner to each lens surface and gently rub with the forefinger of the opposite hand. 3. Clean for about 15 – 20 seconds 4. Rinse the lens thoroughly with sterile saline solution. DO NOT use water to rinse your lenses. 5. After rinsing, place the lens in a storage case. 6. Repeat the process with the other lens. 7. Disinfect lenses as per manufacturer’s instructions. Note: DO NOT HEAT THE DISINFECTION SOLUTION AND LENS.

Lens Deposits and Use of Enzymatic Cleaner:
Enzyme cleaning may be recommended by the eyecare practitioner. Enzyme cleaning removes protein deposits on the lens. These deposits cannot be removed with regular cleaners. Removing protein deposits is important for the well being of the patient’s lens and eyes. If these deposits are not removed, they can damage the lens and cause irritation. Enzyme cleaning does NOT replace routine daily cleaning and disinfecting. For enzyme cleaning, the patient should carefully follow the instructions in the enzymatic cleansing labeling.

RECOMMENDED LENS CARE PRODUCTS
The eyecare practitioner should recommend a care system that is appropriate for the Intelliwave2/Intelliwave2 Pro, Soft Daily Wear Contact Lens. Each lens care product contains specific directions for use and important safety information, which should be read and followed carefully. The table below shows solutions that are recommended for use with the Intelliwave2/Intelliwave2 Pro, Soft Daily Wear Contact Lens.

| Daily Cleaner | MindFlow Extra strength cleaner by CIBA Vision |
| Running Solution | Softline saline by CIBA Vision |
| Disinfecting Solution | Aquily multipurpose solution by CIBA Vision |
| Lubricant/rewetting drop | Aquily long lasting comfort drops by CIBA Vision |
| Enzymatic Cleaner | Enzyme Enzymatic cleaner by CIBA Vision |
| Oxidation Systems | AOEPT or Clear-Care by CIBA Vision |

EMERGENCIES:
The patient should be informed that if chemicals of any kind (household products, garden solutions, laboratory chemicals, etc.) are splashed into the eyes, the patient should FLUSH EYES IMMEDIATELY WITH TAP WATER AND IMMEDIATELY CONTACT THE EYECARE PRACTITIONER OR VISIT A HOSPITAL EMERGENCY ROOM WITHOUT DELAY.

HOW SUPPLIED:
Each lens is supplied sterile in a sealed glass vial containing buffered normal saline solution. The glass vial is marked with the base curve, diameter, dioptic power, manufacturing lot number, and expiration date of the lens.

REPORTING OF ADVERSE REACTIONS:
All serious adverse experiences and adverse reactions observed in patients wearing the Intelliwave2/Intelliwave2 Pro, Soft Daily Wear Contact Lens or experienced with the lens should be reported to Art Optical Contact Lens, Inc. 3175 3 Mile Road NW Walker, Michigan 49534 Toll Free Number: 800-253-9364 www.artoptical.com
